

BECS Engineering Part.1 - BECS Basics

Module length: 3 Days

Content: BECS Basics gives the audience a practical and theoretical understanding of PacketFront's control and provisioning system BECS, its components, functionality, administration, security and maintenance.

This module can be sold separately upon request.

Intended audience: **NE** Network Engineers
NO Network Operation Staff

Prerequisites: The intended audience is required to have extended knowledge about data and network communication and addressing, as well as knowledge about network design and routing protocols, such as PIM, OSPF and RIP.

Result: Upon completion of this part the students will have knowledge and understanding of how to set up a network, how to provision and configure network elements and default services. The students will also have knowledge about roll out techniques, software/configuration upgrade processes.
