

Broadband Network Fundamentals

Course length: self-study

Content: Broadband Network Fundamentals is a preparation course giving the audience a general understanding of PacketFront's True Broadband Networks concept.

The training is provided in a self-study format, and is the first natural step after purchase of PacketFront's solution.

The course can also be used to give Business Developers (and other decision makers) a better understanding of the TBN business development cornerstones.

Intended audience:

- BD** Business Development
- NE** Network Engineers
- PD** Product Development
- DM** Department Managers
- NI** Network Installation Staff
- NO** Network Operation Staff
- SA** System Administrators
- SP** Service Providers
- CS** Customer Support/Support Staff

Prerequisites: The intended audience needs to have basic knowledge of data and network communications.

Result: Upon completion of this course the students will have a clear understanding of the benefits of Broadband Networks and the components within them. The students will also have basic knowledge of cost aspects of building the network, design, traffic planning, availability planning, network services and revenue capabilities.
